**2 SIGNIFICANT ACCOUNTING POLICIES (continued)**

**Available for sale investments**

After initial recognition, investments purchased neither with the intention of being held to maturity nor for trading purposes are classified as available for sale investments and are measured at fair value. Unrealised gains and losses are reported as a separate component of shareholders' equity until the investment is derecognized or the investment is determined to be impaired. On derecognition or impairment the cumulative gain or loss previously reported in shareholders' equity is included in the interim statement of income for the period.

Revenues from available for sales investments are recognized when dividends are declared.

**Investment in an associate**

Investment in companies where the Company effectively participates in the financial and operational decisions of those investee companies, normally when the Company acquires share between 20% to 50%, are accounted for using the equity method.

**Property, plant and equipment**

Property, plant and equipment are stated at cost less accumulated depreciation and any impairment in value. Freehold land and construction work in progress are not depreciated. The cost of other property, plant and equipment is depreciated on a straight line basis over the estimated useful lives of the assets.

Improvements on assets are amortized on a straight-line basis over the shorter of the useful life of the improvement or the related assets.

Expenditure for repair and maintenance are charged to income. Betterments that increase the value or materially extend the life of the related assets are capitalized.

**Capital spare parts**

Capital spare-parts which considered essential to ensure continuous plant operation, are classified under tangible assets, and are depreciated using the straight-line method in accordance with the applicable depreciation rates. The following two conditions must apply to all capitalized spare-parts:

- They are not readily available in the market, or unavailable
- Their manufacturing requires an extended time to complete

**Deferred costs**

Planned turnaround costs are deferred and amortized over the period until the date of next planned turnaround. Should unexpected turnaround occur prior to the previously envisaged date of planned turnaround, then the previously unamortised deferred costs are immediately expensed and the new turnaround costs are deferred and amortized over the period likely to benefit from such costs.

The amortization expenses are included under cost of sales in the interim statement of income.

**Impairment of non-current assets**

The Company reviews the carrying values of its non-current assets for impairment when events or circumstances indicate that carrying value may not be recoverable. If such indicators exist, the recoverable amount of the asset is estimated in order to determine the extent of impairment (if any). Where it is not possible to estimate the recoverable amount of an individual asset, the Company estimates the recoverable amount of the cash generating unit to which the asset belongs.

The carrying value of the asset (or cash generating unit) is reduced to the recoverable value when the recoverable value is below the carrying value. Impairment loss is recognized as expense when incurred.

Where an impairment loss subsequently reverses, the carrying value of the asset is increased to the revised estimate of its recoverable amount, so that the increased carrying amount does not exceed the carrying amount that would have been determined had no impairment loss been recognized for the asset in prior years. The reversal of impairment loss is recognized as income once identified.
