Top Fundamental Picks

Samba Financial Group (KSA), CMP: SAR44.6, Target Price: SAR56.60

Samba's diversified revenues, ample liquidity & loan to deposit room for growth, developed brand name & services' platform, and well capitalized asset base are believed to be a few of its growth drivers. The stock price at around 52-week low offers good potential for rebound. Global Research expects marginal improvement in NII, which coupled with provisions decline could lead to net income increase of 5.1% in 2011.

Industries Qatar (QATAR), CMP: QAR124.9, Target Price: QAR179.87

We believe the company's limited exposure in Europe & US markets will continue to play vital role to sustain future growth and give immunity against the relatively low demand in these markets. On the other hand, we believe IQ is well positioned to tackle the rising competition in Asian markets. The company's capacity expansion, at present, is mainly based on the timely completion (i) QAFCO-5 in 3Q11, (ii) QAFCO-6 in 1Q13 and (iii) QAPCO-LDPE III in 3Q12.

Drake & Skull: (UAE), CMP: AED0.86, Target Price: AED1.26

Drake & Scull profits during 2Q11 were in line with our expectations and higher by 18.4% YoY. Company's current backlog to sales ratio for 2011 is estimated at 2.7x. New awards acquired by the company reached AED3.2bn at the end of 1H11. Company is expected to trim its cost further to keep its margins intact. At current prices it is trading at lowest multiples within its sector.

Top Technical Picks

Qatar International Islamic Bank: (QATAR), CMP: QAR49.50

The bullish trend is still alive buoyed its residency above medium-term (11 weeks) moving average, long-term (50 weeks) moving average and 2nd Bollinger band. The stock is currently capped by the minor resistance layer at QAR50.00, while managing to close over it would promote QAR54.00, however, bulls need to regain February's high at QAR58.40 to re-activate and attract a strong buying potential.

Oman Telecommunication: (OMAN), CMP: OMR1.172

The bulls have engineered the price into the positive territory, rebounding from its history low at OMR1.014 and breaching its medium-term moving average, long-term moving average and 3rd Bollinger band. The price is showing a promise for a further advance towards the first resistance line at OMR1.220 or even a more strength to this year's high at OMR1.290.

Charts

Technical Overview

Technical Overview: Saudi Stock Exchange (Tadawul)

Saudi All Share Index <.TASI> closed at 5,979.30 point. The recent relief seen on the market does not necessarily indicate an end to the bearish move, but it could suggest a short-term bullish tone supported by positive weekly and daily "RSI" indicators. The index encounters an interim resistance level at around 6,160 point, while a more bullish momentum could be extended towards the horizontal line at 6,300 point. Knowing that a firm close above this level would open the space for further gains towards 6,535 point and 6,660 point. However, losing the recent low at 5,795 point will trigger 5,680 point and maybe a revisit to this year's low at 5,231 point.

Strategy: Medium-term (11 weeks) and long-term (50 weeks) investors can re-enter the market above 6,260 point and 6,400 point, respectively.

Definitions:

- * A trend-following momentum indicator that shows the relationship between two moving averages of prices. When the MACD is above zero, the short-term average is above the long-term average, which signals upward momentum. The opposite is true.
- ** A technical momentum indicator that compares the magnitude of recent gains to recent losses in an attempt to determine overbought and oversold conditions of an asset. An asset is deemed to be overbought once the RSI approaches the 70 level, meaning that it may be getting overvalued and is a good candidate for a pullback. Likewise, if the RSI approaches 30, it is an indication that the asset may be getting oversold and therefore likely to become undervalued.
- × Moving average. Which is an arithmetic way and a tool used purpose of easing the price fluctuations to clarify the trend and differentiate between primary or secondary trend of prices and the normal fluctuations.
- ^ The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock.
- ^ The price at which a stock or market can trade, but can not exceed, for a certain period of time. The stock or market stops rising because sellers start to outnumber buyers.

Disclaimer:

This Technical Analysis is not an invitation to buy or sell, as it is "Global's" opinion and speculation of future movement of the stock. Also it is not considered a sufficient material to relay on when taking financial and investment decisions. Investors should study the financial statement before taking any investment decision.

Disclosure

The following is a comprehensive list of disclosures which may or may not apply to all our researches. Only the relevant disclosures which apply to this particular research has been mentioned in the table below under the heading of disclosure.
