

## 3Q2010 Results: Seasonally Boosted, Tweaking Forecasts and Valuation Assumptions

### RESULTS REVIEW

### FOOD AND BEVERAGE | SAUDI ARABIA

#### ≡ Raise Fair Value Slightly to SAR219/Share, Maintain Neutral

We raise our fair value (FV) to SAR219/share (6% upside potential) from SAR214/share, with minor adjustments to our forecasts after 9M2010 results and a reduction in our WACC assumption to reflect lower risk free rate. We reiterate our Neutral rating. Upside catalysts to our valuation include: i) developments in IDJ (JV with PepsiCo), like expansions in Egypt (through Beyti) or entering into new markets, ii) sustainability of higher margins, and iii) introduction of new food categories. Almarai trades on rich multiples versus global dairy peers' estimated 2011 median P/E of 12.8x and EV/EBITDA of 6.9x. This is partly justified by Almarai's higher margins and growth potential.

#### ≡ Core Operational Performance Ushers in Strong 3Q2010 Growth, in Line

Revenue grew 19% Y-o-Y to SAR1,843 million and net profit by 17%, with both coming broadly in line with our estimates. Dairy and juice (64% of revenue) rose 13% Y-o-Y, driven by growth in: i) long-life dairy (+18% Y-o-Y) on market share expansion, ii) baked goods (+32% Y-o-Y), owing to the near doubling of capacity in August 2010, and iii) juice (+19% Y-o-Y). EBITDA was in line at SAR600 million (+19% Y-o-Y) and its margin flat Y-o-Y at 32.7%, with lower-than-expected COGS offset by higher SG&A. Margins and net profit were boosted Q-o-Q by seasonality and Ramadan.

#### ≡ Expect Solid Growth in 4Q2010/FY2011

We expect sales of SAR1.78 billion (+15% Y-o-Y) in 4Q2010, with continued growth in bakery (+33%) and higher growth in juice (+25%) after an increase in processing capacity in 2Q2010. We forecast a 14% rise in EBITDA (with flat margin Y-o-Y) and an 18% rise in net profit to SAR293 million. For 2011, we forecast net profit to climb 16% Y-o-Y, driven by revenue growth, a nearly flat EBITDA margin, and a tightening in dairy and juice margins offset by widening bakery and poultry margins.

#### ≡ Bonus Share Issue to be proposed

Almarai's board of directors announced it will recommend a doubling of the company's paid-in capital to SAR2,300 million through a 1:1 bonus share issue.

### SEASONALITY EFFECTS BOOST FRESH DAIRY SALES & EBITDA MARGIN

Sales and margins were supported by Ramadan's seasonality effect in 3Q2010 as total revenue grew 5% Q-o-Q and fresh dairy sales (including yogurt) grew 13% Q-o-Q. On the other hand, long-life dairy fell 5% Q-o-Q and baked goods 7% Q-o-Q. Poultry sales grew Q-o-Q, but the segment continued to report a net loss, while agriculture grew Q-o-Q and reported positive net profit (before minority interest). The EBITDA margin expanded c360 bps over 2Q2010 as a result of increased capacity utilisation during 3Q2010 and, accordingly, net profit soared 24% Q-o-Q.

## GUIDE TO ANALYSIS

EFG Hermes investment research is based on fundamental analysis of companies and stocks, the sectors that they are exposed to, as well as the country and regional economic environment.

Effective 16 December 2009, EFG Hermes changed its investment rating approach to a three-tier, long-term rating approach, taking total return potential together with any applicable dividend yield into consideration.

In special situations, EFG Hermes may assign a rating for a stock that is different from the one indicated by the 12-month expected return relative to the corresponding fair value.

For the 12-month long-term ratings for any investment covered in our research, the ratings are defined by the following ranges in percentage terms:

| Rating  | Potential Upside (Downside) % |
|---------|-------------------------------|
| Buy     | Above 15%                     |
| Neutral | (10%) and 15%                 |
| Sell    | Below (10%)                   |

EFG Hermes policy is to update research reports when appropriate based on material changes in a company's financial performance, the sector outlook, the general economic outlook, or any other changes which could impact the analyst's outlook or rating for the company. Share price volatility may cause a stock to move outside of the longer-term rating range to which the original rating was applied. In such cases, the analyst will not necessarily need to adjust the rating for the stock immediately. However, if a stock has been outside of its longer-term investment rating range consistently for 30 days or more, the analyst will be encouraged to review the rating.
