6. INVESTMENTS (continued)

(ii) DETERMINATION OF FAIR VALUE AND FAIR VALUE HIERARCHY

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

The fair value measurement is based on the presumption that the transaction takes place either:

- In the accessible principal market for the asset or liability; or
- In the absence of a principal market, in the most advantageous accessible market for the asset or liability.

Consequently, differences can arise between the carrying values and fair value estimates. The Company's financial assets consist of cash and cash equivalents, receivables, reinsurers' share of unearned premium and outstanding claims, other assets, investments, statutory deposits and accrued income and its financial liabilities consist of outstanding claims, reinsurance balance payable and accrued expenses and other liabilities.

The fair values of financial assets that are traded in active market are based on quoted market prices or dealer price quotations. For all other financial instruments the fair value is based on other valuation techniques. These are not materially different from their carrying values at the financial position date.

The Company uses the following hierarchy for determining and disclosing the fair value of financial instruments:

Level 1: quoted prices in active markets for identical assets or liabilities (i.e. without modification or repacking).

Level 2: quoted prices in active markets for similar financial assets and liabilities or other valuation techniques for which all significant inputs are based on observable market data; and

Level 3: prices based on valuation techniques for which significant inputs are not based on observable market data.

The table below presents the financial instruments at their fair values based on their fair value hierarchy.
