INDUSTRY HIGHLIGHTS¹

World Market Demand +3% YoY

- ⊗ Economic growth in major markets remained under pressure in Q3 2023 as tighter monetary policy weigh on household spending and commodities' consumption
- ⊗ Middle East: Demand up by 7% YoY supported by higher consumption in UAE & KSA
- ⊗ Chinese consumption up by 5% YoY driven by recovery in the manufacturing sector [Chinese imports jumped to highest level since November 2021 with major inflows from Russia]
- ⊗ Demand in North America down by 3% YoY owing to uncertain growth in auto and construction sectors
- ⊗ Europe: slow economic growth and higher inflation led to a contraction in aluminium consumption (down by 3% YoY)

World Market Supply +3% YoY

- ⊗ Despite a dull demand, global primary production was pushed up by higher output in China and Americas
- ⊗ North America production up by 7% YoY due to restarts at Canadian smelters (Kitimat and Alumar)
- ⊗ Chinese supply up by 4% YoY (output reached an-all-time high in August) attributed to output growth in the southwestern province in Yunnan following the recovery of hydropower generation
- ⊗ Supply in Europe contracted by 5% YoY due to weak manufacturing activity
- ⊗ The world market is in surplus with China (+3,000 MT) and w/o China (+88,000 MT)

LME Price & Premiums Struggle to Find Positive Momentum

-  LME Price remained under pressure as bearish market sentiment dominated the trading activity. LME-Cash averaged US\$2,155/t in Q3 2023 -- down by 8% YoY [lowest: US\$2,068.50/t on 21 Aug'23 and highest: US\$2,307.50/t on 29 Sep'23]
-  LME inventories at low levels at ~0.5 million MT (up by 47% YoY) with growing inventories of Russian metal in LME-registered warehouses causing concern
-  Premium prices on the swing and are expected to drop in the near-term owing to weak physical demand

INDUSTRY PERSPECTIVES¹ IN 2023

Aluminium Industry: Volatility & Uncertainty to Shape Medium Term Outlook

- ⦿ Aftershocks from pandemic and Russia-Ukraine war will continue to weigh on aluminium fundamentals in the short-run
- ⦿ Prospects for healthier 2024 will depend on better economic performance in major markets and a return to restocking across aluminium supply-chain
- ⦿ Regional premia to further drop against a backdrop of weak demand in Europe and US
- ⦿ Carbon Border Adjustment Mechanism (CBAM): Reporting Phase started in Oct'23 requiring European producers to report their direct and indirect emissions while importers will be required, starting from 2026, to purchase emissions allowances on direct emissions
- ⦿ LME price to range between US\$2,100/t – US\$2,200/t for the remainder of 2023 & is expected to gradually recover from Q2 2024

Major Raw Materials Price Trends (Al_2O_3 , AlF_3 , Liquid Pitch and GPC)

- Despite a weak market sentiment, alumina prices are expected to hold firm over the short-run and will be under pressure over the long-term
- Liquid Pitch prices to range higher as compared to the usual average mainly due to the coal tar pitch use in different applications in other industries
- Aluminium Fluoride prices to further soften owing to stable raw material prices
- Carbon products' prices (GPC, CPC & Anodes) to remain high owing to the restart of idle Chinese capacity following the recovery of hydropower generation; thus, creating increased demand for carbon products
